

VALMEX® structure

Collection upgrade – new colour for architecture

As a result of the consistent further development of the coatings, improved recipes and optimised manufacturing techniques all VALMEX® structure products for textile architecture are now coated with the new colour White 958. The benefits are considerable:

- The special colour recipe enhances the degree of whiteness.
- The colour 958 has a CIE whiteness level of ≥ 90 .
- The reflection values are significantly higher in all light ranges.
- The transmission properties are retained.
- The absorption values of the new colour White 958 are significantly lower.

Depending on the order, VALMEX® structure products can still be coated with the colour White 907.

This and further new additions to our architecture segment can be experienced at the techtextil 2013 in Frankfurt.
